

# FOUNDATION WALL BARRIER SYSTEM

*Easy to Clean • Mold Resistant • Lasts Forever • Affordable*

Transform your dank ugly basement into a dry beautiful space with the installation of a new Boccia Inc. **Foundation Wall Barrier System** that costs a fraction of a full basement refinishing project.

The Boccia Inc. **Foundation Wall Barrier System** is a clean white rigid polyethylene sheathing that is installed directly to the inside of your exposed accessible foundation walls. It creates a clean white finished basement appearance that will last forever and never need maintenance.

Paint will trap moisture within the foundation walls resulting in crumbling concrete and peeling which is damaging to the structure of the house and requires constant maintenance.

The durable **Foundation Wall Barrier** system will allow the wall to breathe and last a life time with a bright, clean finish surface that will never promote mold growth.

Any condensation moisture is directed below the floor to the optional subfloor drainage system keeping the basement DRY!

**Reduce the risk of mold forming within the basement walls...  
Protect your basement investment by installing a proper Vapor Barrier!**

Before framing the basement walls, it is critical to install a vapor barrier to avoid the formation of mold on the building materials.

Mold resistant rigid panels separate basement finish materials, including studs and insulation, from the damp and cold foundation walls.

**BOCCIA** INC
